Assignment 12

1: - InnerHtml

you just change the element you choose to anything you want.

Ex: -

```html
<p class="header">home</p>
```
```javascript
let text=document.querySelector(".header");
text.innerHTML="anything";
```

Output

```html
<p class="header">anything</p>;
```

2: - createElement

you are creating an element.

Ex: -

```javascript
const text= document.createElement("p");
text.innerText = "This is a paragraph";
document.body.appendChild(text);
```
